

OLYMPUS

FEATURES

- Automated Pipe Tripping
- Live Data Integration
- Customizable Interface
- Real-Time Ramp Modification
- Onshore and Offshore Applications
- Automated Mud Rollover

BENEFITS FOR DRILLERS

- Simplified Operations
- Automated ECD Management
- Faster Decision-Making
- Reduced Human Error
- Minimal Rig Intrusion

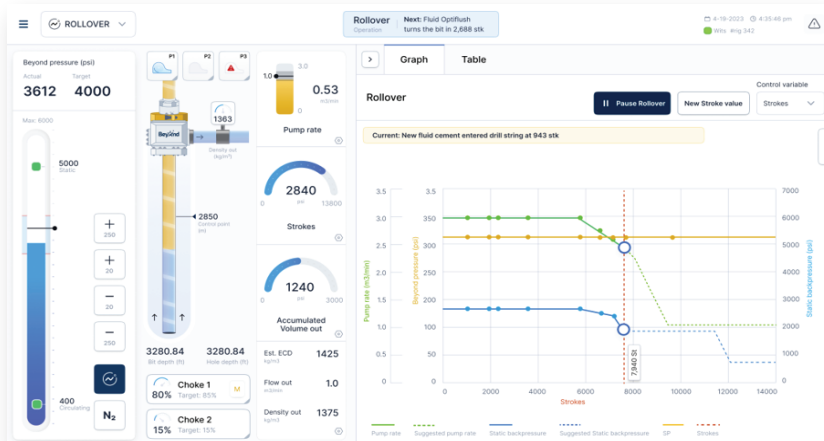

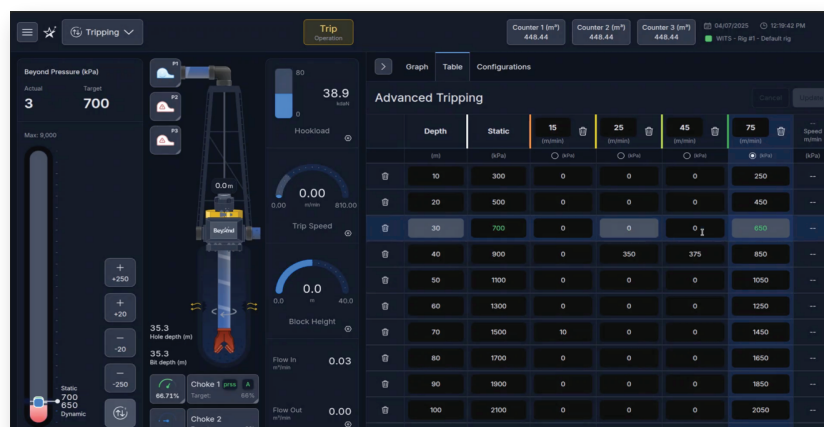

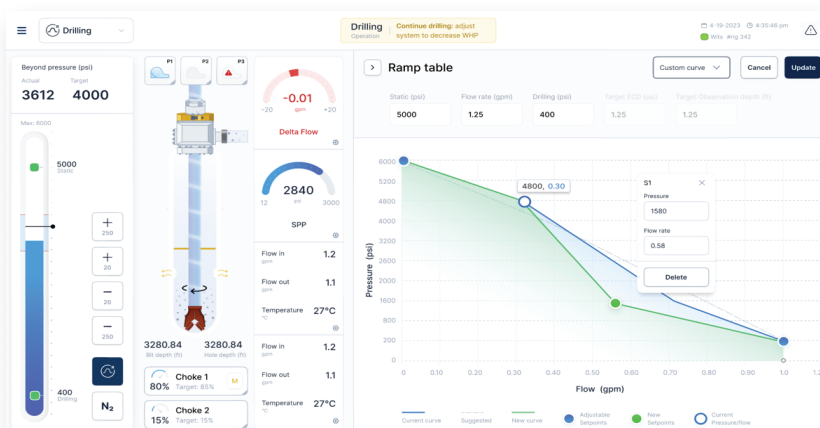

BENEFITS FOR ENGINEERS

- Advanced Hydraulic Modeling
- Transient Hydraulics
- Remote Oversight
- Live Data-Driven Optimization
- Efficient Plan Execution
- Integration with Minerva Hydraulics

Beyond Energy's Olympus MPD represents the future of Managed Pressure Drilling (MPD) automation; this fully integrated control system adapts in real time to downhole conditions. With the automated Equivalent Circulating Density (ECD) control, Olympus delivers unmatched precision, consistency, and safety in pressure management.

Seamlessly integrated with Beyond Energy's Minerva™ software, the Olympus suite of products bridge planning, execution, and monitoring into one unified digital ecosystem.

Whether operated on-site or remote, Olympus empowers drillers and engineers to execute complex MPD operations with confidence, efficiency, and minimal intervention; leading the way in redefining what's possible in automated drilling control.

We do **Managed Pressure Drilling.**
